EXPERIENCE

Full-Stack Engineer

SupplyBoard

April 2024 – Present, Montreal/Sherbrooke

- Develop and maintain backend services using Node.js, delivering reliable APIs and business logic to support core platform functionalities and integrations.
- Design, manage, and optimize robust, secure, and scalable SQL database models with indexing, views, and query design, improving data reliability. And improved search performance by 45% within five months.
- Build and maintain dynamic, server-side rendered, and responsive user interfaces using React and TypeScript, implementing real-time RFQ modules and advanced filtering for an enhanced user experience.
- Develop modular microservices and controllers using Python and JavaScript for data scraping, RFQ automation, order analytics, and CAD file rendering, ensuring high scalability, maintainability, and API performance.
- Deploy and manage full-stack infrastructure on AWS (EB, EC2, RDS, S3, CloudFront, DMS) with GitHub Actions CI/CD, reducing deployment time to 6 minutes through caching and parallelization with zero downtime.
- Implement comprehensive backend test suites using Jest, Supertest, and SonarQube, enhancing code reliability and ensuring consistent feature delivery.
- Integrate React Testing Library and Jest for frontend unit and component testing, enforce code quality with ESLint, dependency checks with npm audit, and continuous static analysis with SonarQube.

Full Stack Engineer

CircusConcepts

July 2023 – Present, Sherbrooke

- Develop and manage reliable and efficient Nodejs backend services for automated custom products pricing, saving company's time and money by eliminating manual processes.
- Design and implement JavaScript services for FedEx, DHL, and UPS shipping integrations to automate rate calculations and remove manual processes.
- Develop a Python-based data synchronization tool integrating Zoho Inventory, Excel, and MySQL database, ensuring cross-platform data consistency and eliminating discrepancies across all systems.
- Developed a Python service to automate the generation of legal trade documents including commercial invoice, USMCA, CETA, and Section 232 upon order fulfillment, streamlining compliance and documentation workflows.
- Led front-end design in React TypeScript, reducing load time by 38% and improving user interface responsiveness and accessibility.
- Migrated two large-scale e-commerce platforms from OpenCart to Shopify, increasing SEO rankings and average CTR and lowering maintenance costs by 30% through modernized architecture and automation.
- Perform comprehensive unit and integration tests using Jest and RTL, ensuring maintainable and reliable front-end architecture.

EDUCATION

Master's in Computer Science

Concordia • Montreal • 2023

Master of Science in Electronics

Minor in Machine Learning (Super-resolution) • Eastern Mediterranean University • Cyprus • 2017

Bachelor of Science in Electrical and Electronic Engineering

Minor in Control Engineering • IKIU • Iran • 2013

SKILLS

Backend: Node.js, Python, Express.js, PHP, RESTful APIs, Microservices

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Responsive Design

Databases: MySQL, SQL Server, PostgreSQL, ORM

Cloud Services: AWS (Elastic Beanstalk, EC2, RDS, S3, CloudFront, DMS), Nginx, GitHub Actions, Docker

Testing: Jest, React Testing Library, Supertest, SonarQube, Artillery

Automation: Python (data ETL, inventory sync, scripts)

E-Commerce: Shopify, OpenCart, SEO Optimization, Schema Markup

AI & ML: scikit-learn, Pandas, NumPy, data preprocessing

Security & Performance: JWT Auth, WAF, Caching, Query Optimization

Collaboration: GitHub, Jira
